

PORT SECURITY BARRIERS

TUFFCAT-20 is an unsinkable catamaran style floating barricade. **TUFFCAT-20** is field-tested and rated a class-1 vessel exclusion barrier for use in ports and harbors and offshore oil fields exposed to a high level threat basis.

Each **TUFFCAT-20** segment measures 21' (6.4m) long and includes multiple rows of topside cable designed to both capture boats and slice into fiberglass and wooden hulls. Multiple TC-20 segments can be joined together to form a unlimited length barrier system. The TC-20 system is readily customizable to the site specific water, weather, wave, hurricane/typhoon and other conditions.

The **TUFFCAT-20** system is ideally suited for open ocean or heavily exposed areas subjected to extreme environmental conditions. This system is capable of including multiple boat access gates of varying opening sizes.

Contact Worthington for a confidential discussion of your security needs.

Features (At-A-Glance)

1. Class -1 Vessel Exclusion Barrier
2. Impact tested
3. Unsinkable flotation design.
4. Accommodates security cable/fencing up to 10' above the waterline.
5. Highly visible
6. Easy deployment.
7. Engineered for punishing conditions.
8. Durable catamaran-style support system
9. Will not mask terrorists hiding behind it.
10. Can be built for the site-specific threat
